- POS Restaurant

Genial365® POS Restaurant is a premier cloud-based restaurant technology platform suitable for all sizes of restaurants. Genial365 POS Restaurant provides scalable, dependable, and simple point-of-sale technology, allowing restaurants to automate operations, communicate with aggregators, delight customers, and generate revenue.

Instead of printing long reports for each shift, you can now access your insights from any smart device, such as a computer, phone, or tablet, and obtain up-to-date sales, inventory, customer feedback/responses, and more, no matter where you are. Other than the benefit of convenience, a cloud-based restaurant POS system helps you manage your business more efficiently.

Accounts & Finance module involves the collection, interpretation, and analysis of restaurant accounts and financial information. This module includes the revenue of the restaurant, cash flow, inventory levels, and income statements. The process allows restaurant owners and managers to overview the documents, all financial transactions of the business and determine how well it is performing.

Sale & Purchase module saves and manages all the Invoice details of the daily orders, purchases, total sales, number of staff members working along with customer details. It keeps the record of all the calculations of sales and purchases accurately. It monitors the purchasing details of the inventory, re-ordered, stock ordered, automatic GST calculation, quantity purchased, and other details by automation cloud-based ERP.

ECommerce Website module helps restaurants to reduce the overheads by automating and streamlining order sync from e-commerce to cloud-based ERP. It helps restaurants to streamline their entire marketing efforts by centralizing all customer-related information. Integrating ECommerce Websites improves customer experiences by centralizing related information, which was earlier locked in many disconnected systems.

Counter Sale module is set up on cloud-based servers and they offer flexibility. It has an online portal that processes payments through a mobile phone or computer, and handheld devices that allow cloud-based servers to enter orders, dine-in, walking orders, online orders, third-party food orders and take payments.

Order Management Module is the most important feature of POS Restaurant. It has an effective order management feature that helps to manage orders like order lists, pending orders, complete orders, and the orders canceled by the customers. It helps to perform all order-related activities by cloud base automation.

Order Taking Via Tablet/Mobile feature enables mobile/Tab Ordering feature through which you can take orders from customers easily and register their favorite food order quickly and easily on your tablet. It promotes effective interaction among all corporate departments.

KOT Management module has the interesting feature of Kitchen Order Token which will serve you in managing the restaurant with ease in a better way. You can print many tokens as per the requirement in the kitchen. POS Restaurant offers an automation cloud-based KOT management module serving your goal of customer satisfaction.

Stock/Inventory Management module manages all stock and inventory with ease by Stock Re-order points, Vendor Management, Payment Reminders, and Payment Vouchers. The complete business details are securely stored and managed accurately by automation cloud-based ERP.

The invoicing module automatically populates your invoices with the right payment information, including any discounts or rebates, giving clients a detailed overview of the payment terms. As a result, the entire procedure is seamless, automated, and precise.

Roles Management module helps in the maintenance of administrative power, which aids in the security of the system. The data is very safe since it can only be viewed by the privileged, authorized user.

Profit & Loss Report keeps a record of all the expenditures in a simplified format. It helps in the analysis of all the expenses, estimating profits and losses incurred to make more informed future decisions.

The balance Sheet module displays a restaurant's net value at a specific point in time, outlining the restaurant's assets, liabilities, and equity. It enables restaurant owners to analyze current financial situations as well as anticipate short-term & long-term cash flow.

The trial balance feature helps restaurants to summarize all the financial transactions of the business.

The daily Transactions feature helps to view detailed reports of sales, stocks, purchases, customer details, and others daily.

Ledger feature help restaurants in handling stock purchase details and supplier account details efficiently which makes it easy for restaurants to properly manage purchase bills, purchase returns, purchase analysis, supplier ledgers, all kinds of payments, stock evaluation etc.

Other Reports module creates customized reports as per restaurant requirements and helps to make better decisions for your restaurant business. It generates daily, monthly, and annual sales reports for in-depth and complete analysis. Maintaining over all your business administration through reporting and these reports may be used for taxation.
