- POS Retailer

Genial365®, cloud-based retail software, has tools that enable you to track and control all aspects of retail management in the cloud. It gives staff and consumers an easy-to-use tool for completing retail transactions in physical locations.

It facilitates the simple tracking of all business activities and provides for the automated recording of transactions in a real-time setting. Its graphical user interface (GUI) allows users to effortlessly interact with the software package. Other advantages of POS Retailer include easy scalability and seamless interface with legacy systems. POS Retailer enables merchants to make the most use of their resources in the cloud. As a result of this optimization, expenses are decreased and earnings are increased.

Accounts & Finance: Retailers can manage their Accounting and Finances easily with Accounts & Finance module for retail as it provides a comprehensive set of tools required to manage all the financial aspects of business, while maintaining a high level of regulatory compliance.

Sale & Purchase: It allows businesses to create purchase approvals across different levels and manage multiple purchase price lists. Retailers can invite suppliers for quotations, and once you receive the quotations, the system provides an automatic quotation comparison tool in the cloud.

It provides businesses an actionable dashboard of stores' sales, orders, and other data such as how much revenue retailers make on each product. This allows retailers to identify and focus on top money-making items and drive into sales. Based on this information, retailers can actually take the decision on what to do with it: whether to offload it through offers and discounts or keep it in hand.

ECommerce Website: Integration with E-Commerce Website helps the retailers to track purchases against inventory in real time. It updates sales numbers automatically; retailers can simply run a report for a certain time period and determine revenue at any given moment in the cloud. Retailers can automate customer updates that keep the most anxious customers satisfied, generating financial reports; thus, giving you an overall better control of business.

Counter Sale: This provides greater control of operations across multiple locations, more efficient processes through data centralization, and improved data reporting in the cloud. Counter Sale helps retailers by integrating sales transactions and customer data with catalogue, inventory, payments, purchasing, accounting, and employee management, businesses can profoundly streamline and simplify operations, even with many locations.

Order Management: Cloud based automated order management module manages different types of orders like sales, wholesale and purchase orders as well as it provides fast search, filtered views, customisable tags and internal notes.

Stock/Inventory Management: It helps retailers to manage the inventory levels, ensuring the constant flow of units into and out of an existing inventory. The cloud-based automated module ensures the requisite stock levels required to complete the transactions, can also help in tracking expiry.

Invoicing: Automated cloud-based module eliminates the risk of paying duplicate invoices. It gives retailers the ability to capture the right discounts, improve supplier relationships, and generally improve productivity across the whole of the business.

Roles Management: The Role Management module helps in assigning role-based specialised actions to users or workers in the cloud-based POS Retail software.

Profit & Loss Report: Profit & Loss reports help retailers to find the important pieces of information they need to make critical decisions.

Balance Sheet: It includes inbuilt workflows; they improves the management of cash, resolves problems with cash flows, and simplifies complex accounts payable and accounts receivables activities. Retailers can easily gather, track, and analyse the financial balance sheet from different departments and use this information to manage your business better.

Trial Balance: Trial balance consists of the results of stocktaking. Retailers can count, measure, or weigh all tangible assets and list all tangible, fixed, current, and intangible assets as well as all debts at one glance.

Daily Transaction: Daily transactions module makes sure that retailers can view the fiscal health of the organisation efficiently and with clarity, helping to control expenses, measure revenues, and handle other activities of the transaction process. It ensures that you stay informed of every financial transaction immediately when it happens.

Ledger: The Retail Ledger collects actual data from Financial Accounting, Controlling, Human Resources, Sales and Distribution, Materials Management, and other sources.
