Accounts & Finance module provides Petrol Stations a complete Financial control including Banks Flow & Cash Flow, Bank Reconciliation, Credit Customer Payment Receive, Amount Receivable / Payable and Profit & Loss Report analysis.

DiP Management module helps the petrol stations to manage the physical stock in the tank that can be measured by dip and then it can be compared to the in-stock quantity of the petrol. It provides a DiP chart that shall be used to calculate stock in the tank while recording dip entries.

Dispenser Sale Management helps in the listening of POS system and dispenser communication, as well as the transmission of dispenser transactions to the ATG console for tank reconciliation and automated calibration. Dispenser Sale Management helps to monitor and control fuel dispenser operation from the console display in parallel to the POS system already installed at a petrol station through a cloud-based environment.

Tank Storage Management gathers the data you need to reconcile fuel consumed with purchases and inventory. It also monitors storage tanks 24/7 and alerts you immediately of any leaks and records fuel drops. It provides a single-click balanced report of consumption to purchases and inventories that help to get accurate records needed for full compliance with environmental regulations.

Stock Management is an automated system that can be used to manage inventory records of stock levels of petroleum products on a daily basis. This module allows filling station operators to compute daily sales and quantify the number of liters of petroleum products remaining, allowing them to simply determine when to reorder.

The shift Sale Management module helps in monitoring all sales activities taking place at the Petrol Station as well as keeping a record of sales based on the employees' shifts. It maintains track of sales by product, point, time, the shift of the employees and you may also view the comprehensive sales report to improve the operation of the petrol station.

The Profit and Loss Report summarizes the individual base performance of the petrol stations over a specific period. It displays the value of sales of petrol and direct costs for the specified period. It helps to drill down on the figures in the report to see which transactions are included through an automated cloud environment.

Trial Balance Report is highly significant for Petrol Station Owners since it helps them with planning and analyzing critical elements. This module supports them in comparing prices, spending, revenue, budgeting, and making crucial financial decisions concerning their organization.

Daily Transaction automated cloud environment displays all transactions on a daily basis. The daily transaction report provides a daily overview of Petrol stations sales, credit card transactions, including both refunds and payments.
