Capabilities

Accounts & Finance module enhances and automates your core financial operations. Support your most complicated financial requirements with accurate accounting and reporting processes. It offers a full suite of components that can handle processes involved in General Accounting, Receivable Management, Payable Management, Fixed Assets Accounting, Management Accounting, and Financial Services besides providing functionality for dealing with country-specific tax regulations via a cloud-based environment.

The Gate Pass module enables users to grant gate passes to any material that enters and exits the office/factory premises for any reason. The Gate Entry module is utilized at the factory gate to record the location of each vehicle/material, both inbound and outgoing, using an automated cloud-based mobile or desktop system.

Sales & Purchase module manage payment structure and commission-owed records that are generated automatically by customer shipments and other kinds of activity. Keep an eye on client satisfaction, sales projections, and your competitors. It streamlines the acquisition of needed materials, packaging material, and other non-inventory materials. It automates the operations of identifying potential suppliers, granting purchase orders to the vendors, and billing processes.

Stock Management allows you to execute stock management in the most detailed way possible. You can categorize products, item units, and standard suppliers. It separately defines the planning type, allocation, and cost pricing for sales and purchases. It also organizes the objects into groups for more effective analysis. It helps you in carrying out warehouse activities efficiently. It oversees tasks such as stock status conversion and stock transfers.

The Petty Cash module records the inflow and outflow of cash of trading during a particular period, and thereby, you can track any changes in the position of cash. It also tracks the use of cash that you can use to handle small expenses that arise over the course of everyday activities using an automation cloud-based environment.

The profit and Loss module helps in the monitoring of the condition of trade activities through an automated cloud-based environment. It highlights income, expenditures, and expenses for a certain time period, such as a quarter or a year. As a result, you can quickly calculate the net outcome of trading operations and activities.

The Balance Sheet module gives a clear picture of your trade's financial status at any given time, and you can simply examine the sheet via an automated cloud environment. It gives you a detailed view of your assets and obligations.

The Trial Balance module helps traders in checking whether the transactions are correct and balanced and also helps them to ensure that the entries in books are mathematically correct. You can simply identify any errors, and make the necessary adjustments easily at any time without any issue.

The daily Transactions module provides a number of benefits for a trade business alongside the obvious necessities. It promotes efficient workflow and allows traders to identify where errors are occurring so that they can be managed more effectively. It provides valuable insight into what is happening in the business on a daily basis.

The ledger module tracks all financial transactions and is used to generate the company's financial statements, including the Income Statement and Balance Sheet. It summarises the various trading financial accounts and transactions, such as accounts receivable, accounts payable, fixed assets, and inventory via an automation cloud environment.
